HOW TO INSTALL OUR EASYFIND CARAVAN SYSTEM

This e book will show you how to install the system shown below in your Caravan

Assemble the Dish Kit and fit the EasyFind LNB to the Dish.

Mount the Dish on the Tripod (Optional Extra) or Pole (Not Supplied).

Basic Equipment you will need.

- 1) Spanners/Socket Set
- 2) Screwdriver

Remember!

The dish must have no obstructions between it and the satellite (Trees Etc)

Connect the cable to the dish & receiver before you plug the receiver into a 240 or 12v power supply.

Connect to the TV and switch on the system, press the INFO button on the satellite receivers Remote Control ONCE.

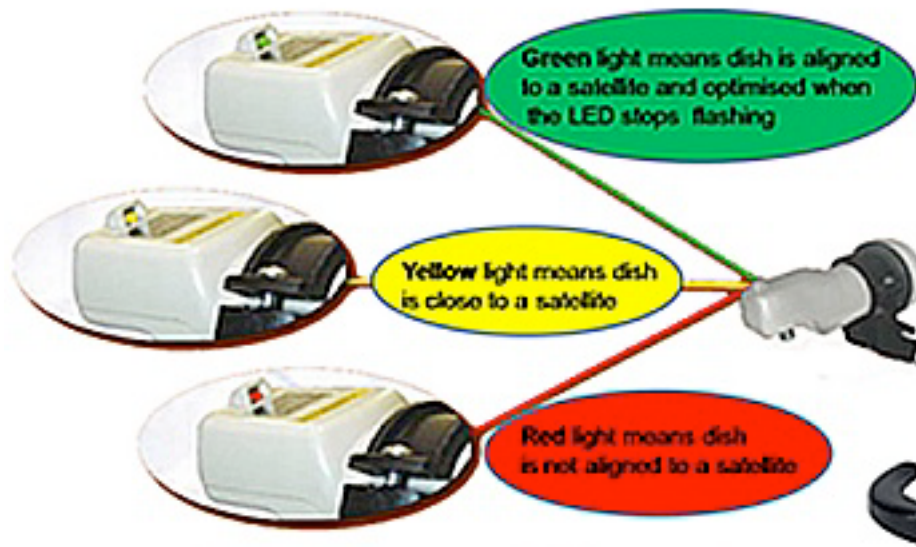

You will see a RED light on the LNB, position the Dish towards Due East direction and gently swing the dish (adjusting the dish elevation as required) towards the South until the Indicator light glows YELLOW on the LNB at the dish.

You are nearly there! - As we pre-tuned the receiver for the Astra 28.2 satellite the EasyFind system will ignore ALL other satellites.

A Yellow light indicates " Astra Satellite Found" - All you have to do is to very gently move the dish left/right or up/down until the light changes to SOLID GREEN.

Exit the INFO screen as You have found the strongest signal from the correct satellite.

The satellite receivers default menu password is 0000 (Four Zero's).

DISTRIBUTION OF THIS E-BOOK
